Naked 

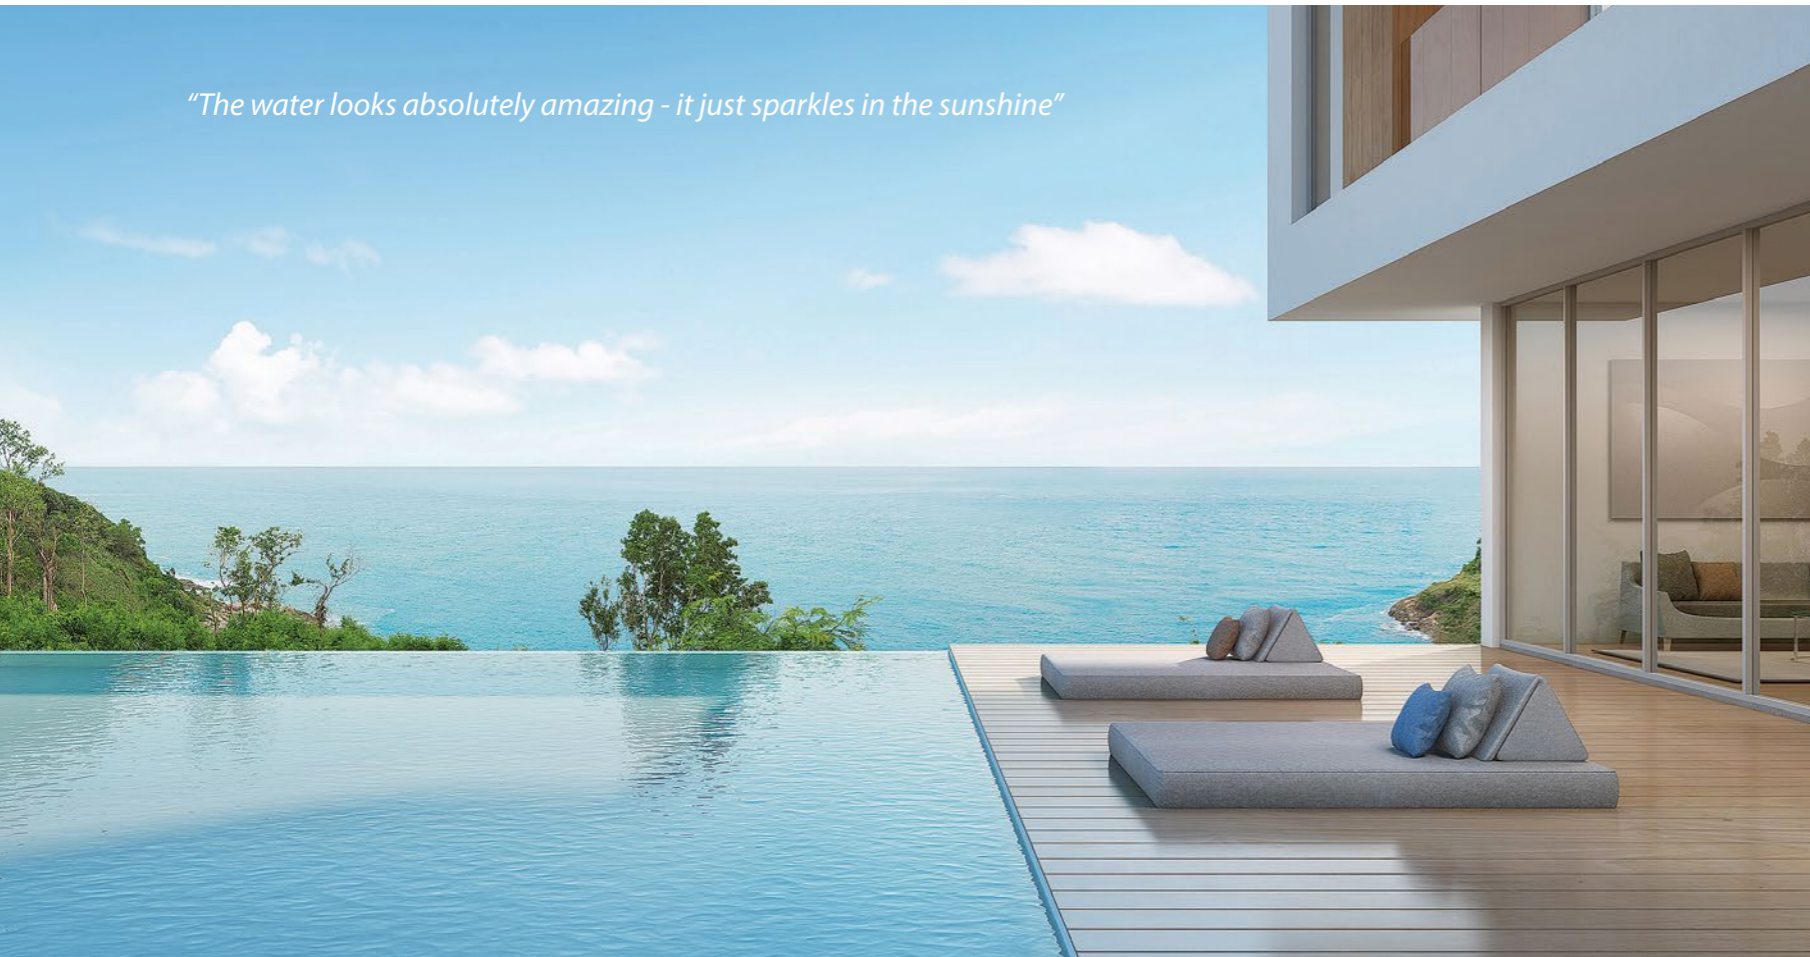

*Feel the difference
of a fresh water pool*

CLEAN • PURE • SIMPLE

CLEAN • PURE • SIMPLE

"The water looks absolutely amazing - it just sparkles in the sunshine"

The Naked Story - swimming as nature intended

Naked Pools are passionate about innovation, service and the total experience that having a pool brings to a family. Our primary focus is the experience our customers will enjoy swimming in a fresh water pool.

With over 40 years combined industry experience, we are setting a new benchmark for water quality in the swimming pool industry, while delivering a product that is simple to use and maintain, has lower running costs and is great for the environment.

-  A healthier lifestyle choice for your family
-  Perfect for asthmatics, psoriasis and eczema
-  Up to 60% saving on running costs
-  Backwash straight to your garden without dilution
-  Longer lasting equipment and pool surrounds
-  Far less maintenance than traditional systems
-  No need to wash swimwear or shower after use
-  No red eyes or irritated skin

Environmental Benefits

Reduced running costs by up to \$1000 per year.

Less power consumption is always better for the environment, as well as saving you money over the longevity of your pool.

Backwash straight to your garden without dilution.

You can use the water from your pool directly onto your garden lawn and plants. Not only does this save water, there are no hazardous chemicals going down the public drainage systems.

All pool equipment will last longer.

Without the harsh chemicals of chlorine and in particular salt chlorinated swimming pools, your pool filters, pipes, tiles and other surrounds will last much longer. Again, saving you money and the need to replace products such as plastic or glass from around your pool.

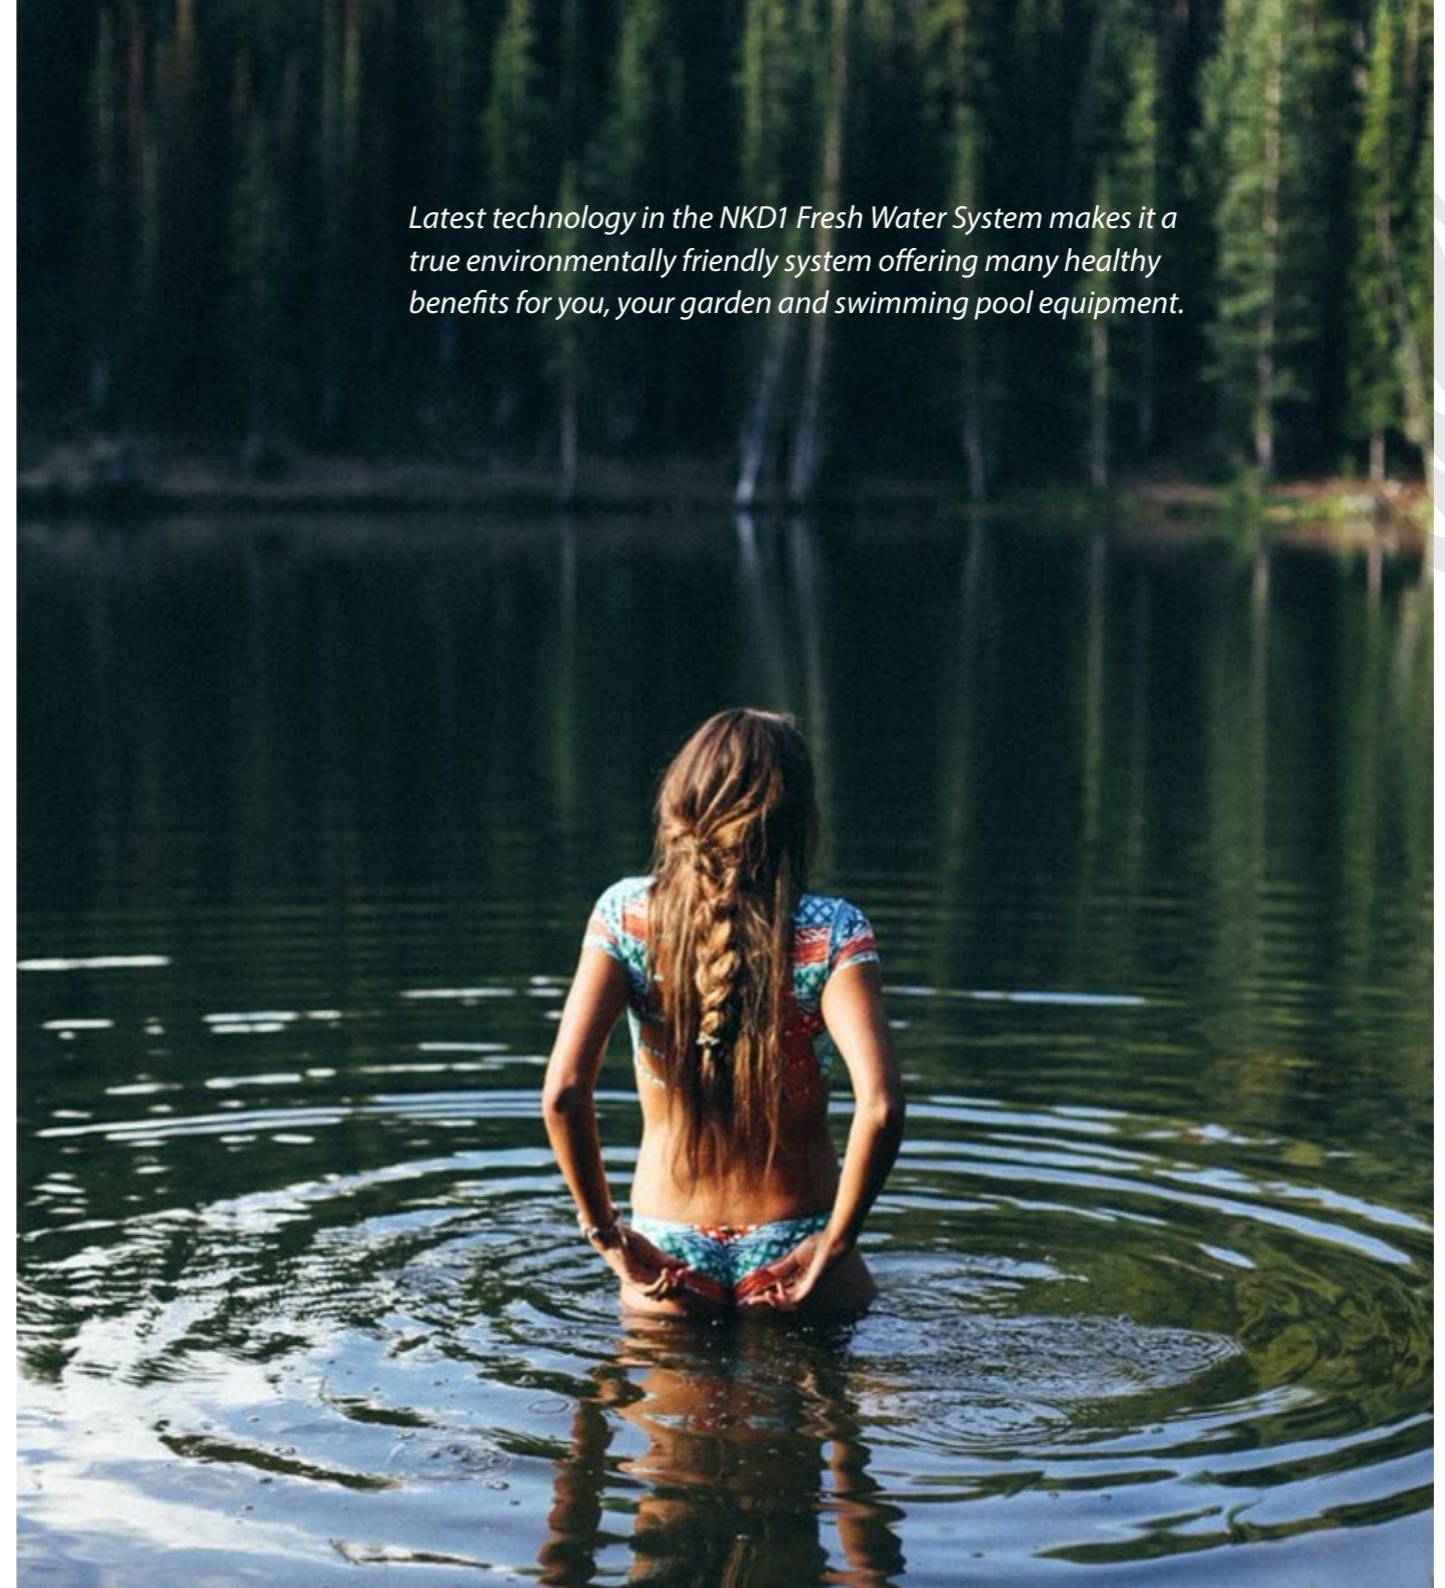

Your swimwear will last longer.

Your clothes won't deteriorate like they do when swimming in chlorine or salt pools. In fact, the water is just like having a shower. So no need for rinsing your bathers or yourself after swimming saving on water consumption.

Reduction in chemical usage.

You do not need to add other chemicals such as stabiliser or blockout to maintain chlorine levels in your pool like traditional systems. So your pool is better for the environment and your health.

Latest technology in the NKD1 Fresh Water System makes it a true environmentally friendly system offering many healthy benefits for you, your garden and swimming pool equipment.

Taking into account one in three Australians have some kind of skin condition, or suffer from asthma, Freshwater systems have become increasingly popular as consumers are understanding there are better alternatives to chlorine, salt or mineral based chlorinators.

Asthma & Allergies

If eczema, dermatitis, itchy skin, asthma or skin rashes are a problem at your home, contact us to discuss a fresh water alternative that is making a huge impact in the industry. We invite you to explore the difference you can make to your swimming experience and take the first steps to a healthier lifestyle for your family and friends.

Water no different to your household tap!

Australia has some of the best quality tap water in the world. Although our water comes from natural resources, catchments and mountains, it still requires filtration and additives to ensure it remains fresh and bacteria free when used at home.

We all know that chlorine is one of the main additives in our domestic water. In nearly all cases, the amount is so small that you are not able to smell or taste it. The same applies for a Naked Pool.

NKD1 FRESH WATER SYSTEMS - A better alternative

Ancient Greeks found that water kept in silver containers mysteriously purified, and algae didn't grow in copper water pots. In the late 19th Century, water was passed through various porous materials impregnated with silver, creating positive ions and purifying it.

The NKD1 hybrid swimming pool system utilises a similar concept by releasing silver and copper ions into the water and with the addition of oxidation provides healthy, crystal clear fresh water.

The features are endless:

The Ions in the water continue to disinfect even when the system is not running.

The ions are not affected by heat or sun like typical chlorine or salt and mineral chlorinators so there is no need to add chemicals such as stabiliser to protect the water.

The continuous effects of the minerals remaining in the water means you can run the system for half the time of traditional sanitisers. This amounts to big savings in power and ongoing running costs.

TDS (total dissolved solids) are at extremely low levels providing crystal clear water.

A well-balanced pool using ionisation rather than high levels of chlorine can be backwashed direct to your garden and is better for pool equipment and surrounds.

Designed and engineered by one of Australia's leading manufacturers.

Easy to use, multi-function digital display.

Precise touch pad and time clock control.

Flexible timer control works perfectly with variable speed pumps.

Smart self-cleaning technology.

Variable OXI and ION control.

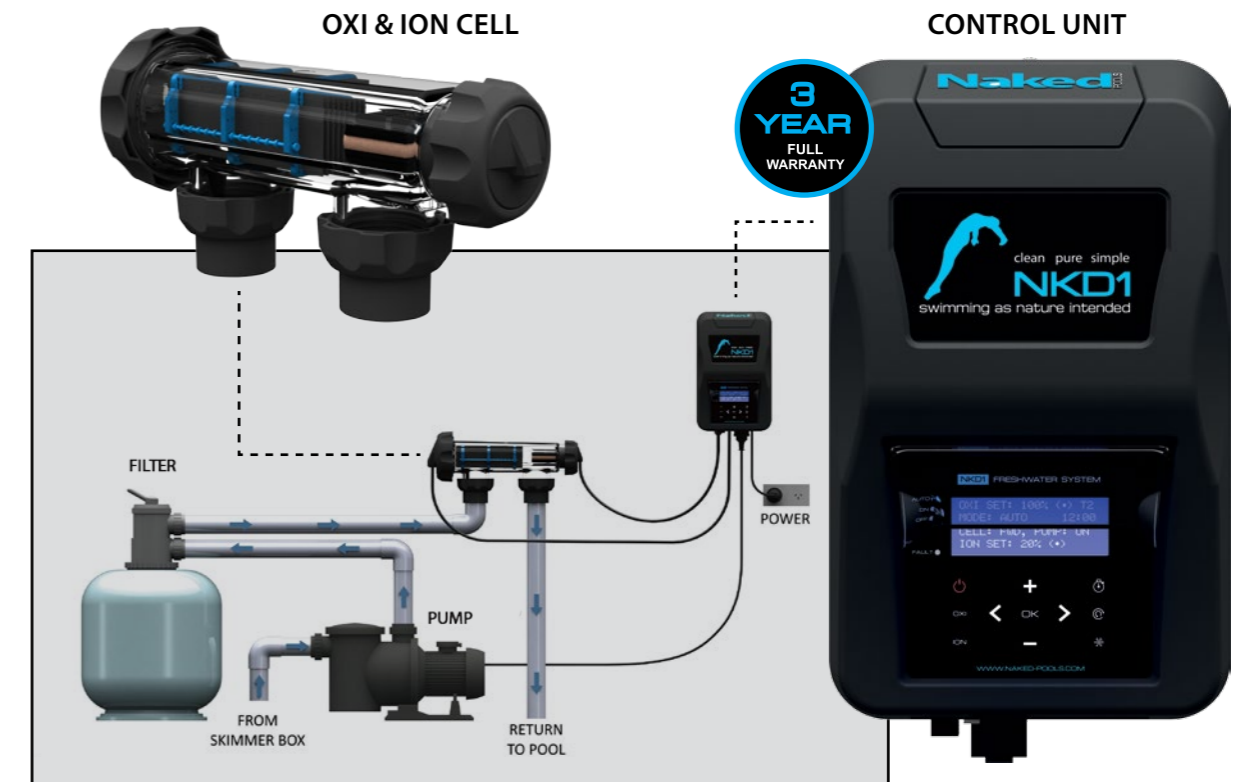

Backwash and winter mode functions.

Suitable for concrete, fibreglass, vinyl and tiled pools.

NKD1 System

The hybrid NKD1 System is made up of a digital control unit which supplies and manages current to the electrode assembly (OXI & ION Cell). Electrolysis passes through the copper and silver anodes, releasing the ions into the water. The silver disinfects the water controlling bacteria and the copper prevents algae growth.

In addition, oxidation is used as water passes over the oxidising plates producing small, untraceable amounts of chlorine ensuring organic matter and other contaminants are eliminated from the water. The NKD1 System will work with any type of new pool and can be retrofitted to any existing pool or spa.

Rejuvenating & Refreshing

Different to traditional pool and spa systems that rely on high levels of chlorine to sanitise the pool water, the NKD1 System utilises nature's natural minerals such as copper and silver.

Algae cannot grow in a copper environment, while silver has purifying qualities, and these minerals remain in the pool to constantly sanitise your water.

With extremely low amounts of salt and the minerals present, the water in a Naked Pool has a soft and rejuvenating feel, best described as swimming in a fresh water stream.

And there is no need to shower or rinse your swimwear after use!

The NKD1 System is scientifically engineered to as closely as possible resemble the balance of a fresh water stream, making it the healthiest option for pool sanitisation.
